What Clients Say About Us

“ The study guide is valid. I pass the exam and get a nice score. Most questions are valid and only 5 questions are new. I don't believe on-line advertisement before until this exam JN0-1330. - **Daphne** ”

“ Pass HPE2-T30 easily. I will buy HP2-Z37 too. Please give me discount. I hope it is cheap. - **Freda** ”

“ I like this dump. It is really the latest version. It is different from I buy from other company. I must to say I can not pass without this dump. - **Milo** ”

Exam : **VCS-277**

Title : Administration of Veritas
NetBackup 8.0 and NetBackup
Appliances 3.0

Vendor : Veritas

Version : DEMO

NO.1 Upon arriving at work on a Monday, an administrator sees several replication Jobs that have failed with the following error message:

No images were successfully processed

Which two reasons may be the cause for the error code? (Select two.)

- A. The checkpoint restart is disabled for the replication Jobs.
- B. There are network connectivity issues between the source and target domains.
- C. The NetBackup host ID-based certificate was revoked.
- D. There is insufficient storage space on the target storage server.
- E. There are insufficient tapes in the replication volume pool.

Answer: A,B

NO.2 An AdvancedDisk storage unit consistently reaches capacity, causing older, staged backups to expire.

How can the administrator control the prioritization of images that get removed?

- A. change the priority for secondary storage lifecycle operations
- B. use Data Classification
- C. change the priority of relocation jobs in the staging schedule
- D. modify Retention Levels

Answer: D

NO.3 An administrator observes intermittent connectivity issues between the appliance and clients. Which NetBackup Appliance Shell Menu (CLISH) command can the administrator use to assist in diagnosing the problem?

- A. Main_Menu > Support > DataCollect
- B. Main_Manu > Support > NBDNA
- C. Main_Menu > Support > iostat
- D. Main_Menu > Network > Show Status

Answer: A

Explanation:

NO.4 Which feature is enabled after adding a master server to the Trusted Master Servers tab?

- A. backup of clients in other master server domains
- B. remote console to another master server
- C. targeted Auto Image Replication
- D. remote catalog backups

Answer: C

NO.5 An administrator has a master server running over 50,000 jobs per day.

What can the administrator do to reduce the load on the master server?

- A. replicate the backups to another master server domain
- B. configure a new master server to distribute the backup load
- C. add additional media servers to the environment
- D. configure client-side deduplication and load balancing media servers

Answer: C

NO.6 An administrator wants clients in a remote office to perform client-side deduplication instead of Media Server deduplication.

Where should the administrator set the parameter in the Host Properties to ensure client-side deduplication is performed?

- A. Master Server > Client Attributes > client_hostname > General > Always use client-side deduplication
- B. Clients > General > Always use client-side deduplication
- C. Master Server > Client Attributes > General > Always use client-side deduplication
- D. Clients > Deduplication > Always use client-side deduplication

Answer: A

NO.7 Which scenario accurately describes the creation of a full synthetic backup using tape?

- A. a single drive can be used for both the read and write of the backup
- B. a separate read drive and write drive can be used on the same Media Server
- C. a read and write drive can be used on different Media Servers
- D. a disk storage unit must be used prior to copying the backup to tape

Answer: B

NO.8 An administrator has a backup policy with the following policy attributes:

3 paths listed in the Backup Selections list

5 clients listed in the Clients list

Allow multiple data streams is selected

Limit Jobs per policy is set to 4

How many jobs go Active when the job is started, excluding parent jobs?

- A. 3
- B. 4
- C. 12
- D. 15

Answer: B

NO.9 An administrator wants to specify which networks or interfaces to use for outgoing NetBackup traffic from a selected host.

Which option under Master Server Host Properties should the administrator use to configure this?

- A. Preferred Network
- B. Port Ranges
- C. Network Settings
- D. Bandwidth

Answer: D

NO.10 An administrator has downloaded a patch from the NetBackup appliance support website to a Windows client. The administrator plans to move the patch to the appliance through a file share.

Accessing the \\<appliance-name>\incoming patches folder from the Windows client fails.

What does the administrator need to perform?

- A. login to Windows as a NetBackupCLI user
- B. install the Microsoft NFS Client package on the Windows client
- C. use the share Open command in the CLISH
- D. use the copy /k> command to join the split tar files

Answer: A

NO.11 Which supported step should an administrator perform to ensure all operating system logs are sent from an appliance to a central logging server running Linux?

- A. configure access to the appliance logs with the share open command
- B. configure syslog forwarding in the appliance CLISH
- C. configure syslog forwarding in OpsCenter
- D. configure cronjob on the appliance to copy the logs

Answer: A

NO.12 Which backup storage is unsupported with media server load balancing?

- A. BasicDisk
- B. Media Server Deduplication Pool
- C. AdvancedDisk
- D. Media Manager storage

Answer: D

NO.13 Which NetBackup 8.0 command is used to report the potential free space of AdvancedDisk storage units?

- A. nbdevquery
- B. nbdevconfig
- C. nbemmcmd
- D. bpstinfo

Answer: A

NO.14 An MSDP Media Server is experiencing performance issues when running multiple deduplication backup jobs concurrently over 10 GbE. When switched to AdvancedDisk on the same Media Server, the backups perform well.

Which step can be utilized to mitigate the performance issues?

- A. reduce network congestion between clients and the Media Server
- B. increase the size of the MSDP disk pool on the Storage Server
- C. add load balancing Media Servers for the Storage Server
- D. set the clients to back up over SAN

Answer: C

NO.15 What is the image removal behavior for relocated images from a disk staging storage unit when the high water mark is reached during a backup?

- A. NetBackup removes the oldest images until the low water mark is reached.
- B. NetBackup removes images alphabetically until the low water mark is reached.
- C. NetBackup removes the largest images until the low water mark is reached.
- D. NetBackup removes images with the lowest rank data classification until the low water mark is reached.

Answer: A
